EDUCATION

Anurag University <i>Bachelor of Technology in Computer Science and Engineering (Data Science), GPA: 8.31/10</i>	Hyderabad 2023 – 2027
Sri Chaitanya Junior College <i>Intermediate (Maths, Physics, Chemistry), Percentage: 86%</i>	Hyderabad 2021 – 2023

EXPERIENCE

Java Full Stack Intern <i>Eduskills Academy – Cohort 15</i>	Jan. 2026 – Mar. 2026 <i>Remote</i>
- Developed and deployed full-stack web applications using Core Java and Spring Boot for backend services alongside React.js for responsive frontend interfaces. - Gained hands-on experience building RESTful APIs, integrating databases using JDBC and Hibernate ORM, and applying object-oriented design principles throughout a structured 10-week curriculum.	
AI Innovation Intern <i>Tekisho Infotech Pvt. Ltd.</i>	Aug. 2025 – Dec. 2025 <i>Hybrid</i>
- Contributed to AI-driven digital transformation initiatives at an enterprise IT firm, applying machine learning techniques to automate workflows and enhance operational efficiency across cloud-integrated systems. - Developed and evaluated predictive models using Python and scikit-learn on real-world datasets, leveraging exploratory data analysis and feature engineering to derive actionable business insights aligned with intelligent automation goals.	

PROJECTS

Spark <i>React, Vite, Node.js, Express.js, PostgreSQL, Gemini API</i> Live GitHub	January 2026
- Engineered a full-stack AI-powered UI generation platform integrating Google Gemini API to convert natural language prompts into UI, deployed on Vercel with a Node.js/Express REST backend. - Architected a stateless JWT authentication system with bcrypt password hashing, protected API routes via Express middleware, and an Axios interceptor on the frontend for automatic token attachment across all requests. - Designed a normalized PostgreSQL schema with indexed foreign-key relationships between users and generations tables, enabling efficient per-user history retrieval and cascading delete operations. - Built a chat-style iterative builder UI in React with a resizable split-pane layout, toggling between live iframe preview and raw source code view, supporting multi-turn prompt refinement against a persistent generation context.	
CodeCollab <i>React, Node.js, Express.js, Socket.io, Prisma, MySQL</i> Live GitHub	September 2025
- Built a full-stack real-time collaborative coding platform where multiple developers can write, run, and discuss code simultaneously using Socket.io for live cursor sync and code broadcasting. - Integrated an AI pair programmer powered by Groq (LLaMA 3) with streaming SSE output, providing context-aware code assistance directly within the shared editor. - Implemented live code execution in 8+ languages (JavaScript, Python, Java, C++, Rust, and more) via the Judge0 CE API, with results broadcast to all room members in real time. - Designed a secure JWT authentication system with access/refresh token rotation via HTTP-only cookies, and a room system supporting public/private rooms with invite codes.	

SKILLS

Languages: Java, JavaScript, Python
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, Spring Boot
Databases: MySQL, MongoDB, Supabase, PostgreSQL
Tools & Platforms: Git, GitHub, VS Code, Postman, Docker, Prisma ORM
Concepts: REST APIs, WebSockets, JWT Authentication, OOP, DSA
